

PRESENTATION

JENNIE AND ALEXANDER ARE TWO OF THE MILLION PEOPLE THAT TRAVEL BY TRAIN ON A DAILY BASIS, TO GET TO WORK, GO ON HOLIDAY OR TO VISIT A LOVED ONE

We at Dellner are the global leader when it comes to Train connection systems and our products makes the train journey more secure and productive. Since 1941, Dellner has led innovation in coupler systems, for all type of rail vehicles. Over the years we have grown

to become a major global player within Train connection systems, serving customers all over the world. We have today more than 500 employees, headquarter and factory located in Falun, Sweden and with factories, service plants and sales offices all over the world.

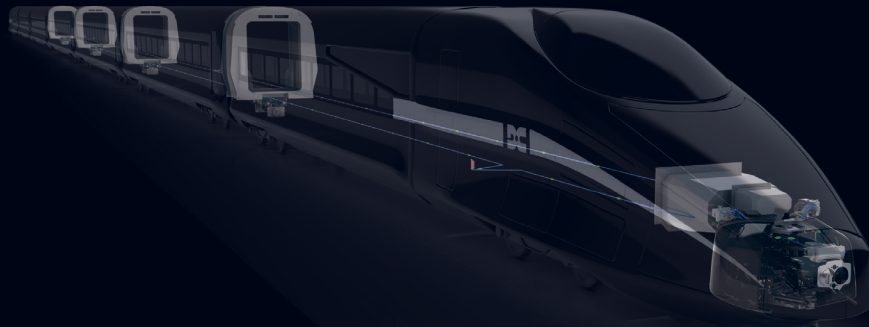

WE MAKE LIFE CRITICAL CONNECTIONS

DELLNER INNOVATIONS USED WORLDWIDE

Dellner's reputation is based on innovative research and advanced design. In the past half century, we have introduced several global breakthroughs in the rail industry. Dellner is a niche company servicing a large worldwide industry with products like couplers, dampers and gangways. In the total train build up, our train connection systems contribute a small, but highly safety and operational critical function.

LINKING TRAINS IS LIKE THE DNA OF LIFE

By enhancing the stability and safety of rolling stock, and securing failsafe inter-car communication, Dellner plays a key role in rail development. Linking trains and linking the building blocks of life have much in common. Inserting or replacing a DNA strand has a life changing impact – literally. Advanced coupling technology and train dynamics cannot create life – but it certainly saves lives. And, like DNA researchers, any innovation we introduce must consider its impact on the entire structure – in our case, a train.

KEEP TOGETHER

**WE KEEP BOTH TRAINS
AND PEOPLE TOGETHER.**

With a strong company culture that builds on our core values RESPECT, ACTION, JOY and TEAM – we create a strong fellowship between our co-workers all over the world. This is a way that have made Dellner both successful, profitable and popular as an employer.

Our products keeps the train together and makes the train journey more secure and productive. We will continue to work from our strategy to deliver new innovations and products to maintain and develop our position as the world's number one supplier of train connection systems. Before the end of 2012, Dellner plan to have subsidiaries in 15 different nations. We invite you to be a part of that journey.
